

# SCHALLSCHUTZTORE SOUNDPROOF DOORS

Das Schallschutzelement mit schallabsorbierender, gelochter Innenschale ist vorwiegend geeignet für Tore, Wände und Decken. Zwischen der Innenschale und dem Dämmkern aus Mineralwolle ist ein spezielles Vlies eingelegt. Die Ausbildung der Innenschale trägt erheblich zur Verbesserung der Raumakustik bei. Durch die hohe Dichte des Dämmkerns werden gute Schalldämmwerte erreicht.

Self-supporting panel system, insulated with rock-wool for wall and partition applications, requiring a high degree of resistance to fire, with sound absorption and sound insulation.

The panel, is manufactured in accordance with a system patented by Metecno, and consists of a micro-ribbed external steel facing, an internal flat, but perforated liner, with an insulation core of high density orientated rockwool, arranged perpendicular to the plane of the panel and positioned in strips, laid longitudinally with off-set joints and transversally compacted, in such a way as to completely fill the void between the two metal facings.
